

JESÚS COCAÑO

Senior Backend & Platform Engineer

México · Remote

jesus.cocano@gmail.com | github.com/jcocano | linkedin.com/in/jcocano

PROFESSIONAL SUMMARY

Senior Backend & Platform Engineer with 7+ years building production-grade distributed systems and 12+ years in infrastructure and operations.

Experienced in architecting scalable cloud-native platforms, Kubernetes-based environments, and event-driven microservices across AWS and GCP. Strong background in production reliability, infrastructure automation, and system design under real-world traffic conditions.

Combines backend engineering depth with infrastructure expertise to design, operate, and scale resilient systems — from early-stage architectures to mature production platforms.

PROFESSIONAL EXPERIENCE

Yuga Labs

Senior Software Engineer – Backend & Platform
Remote | Dec 2024 – Feb 2026

- Designed and evolved distributed backend services supporting blockchain-integrated products in production environments.
- Architected scalable APIs operating under high-traffic global events.
- Led architectural discussions influencing scalability, deployment strategies, and infrastructure reliability across Kubernetes-based systems.
- Participated in incident response, root cause analysis, and postmortem improvements for production systems.
- Contributed to infrastructure hardening, observability improvements, and deployment reliability across multi-environment cloud setups (AWS / GCP).

tokenproof

Senior Software Engineer – Backend & Platform
Remote | 2022 – 2024

- Architected distributed authentication systems integrating on-chain verification with backend microservices.
- Designed event-driven service communication using Apache Pulsar and Google Pub/Sub.

- Provisioned and operated Kubernetes-based production infrastructure using Terraform and Terragrunt, including VPC networking, managed databases, and messaging systems.
- Strengthened CI/CD workflows and deployment standards, improving reliability and reducing operational overhead.
- Participated in production troubleshooting across multi-cloud environments (GCP / AWS).

METAONE

Founding Engineer / Blockchain Developer

Hybrid (GLD Mex) | 2022

- Designed and deployed Solidity smart contracts for DeFi and NFT ecosystems.
- Implemented backend services integrating web applications with on-chain logic.
- Contributed to early-stage architecture decisions balancing scalability, security, and delivery speed.

Savare Medika

Software Engineer – Backend & Enterprise Integrations

2018 – 2022

- Developed enterprise backend solutions using Java and C#.
- Designed event-driven integration patterns using Kafka.
- Built Salesforce solutions (Apex, Visualforce) for enterprise workflows.
- Implemented idempotent data processing strategies across distributed systems.

Early Career – Infrastructure & Systems Engineering

2006 – 2013

- Managed enterprise-grade server environments, networking infrastructure, firewalls, and hosting systems supporting business-critical operations.
- Developed strong foundations in systems reliability, uptime management, and operational continuity.

TECHNICAL PROFILE

Cloud-native backend systems · Distributed & event-driven architectures · Kubernetes-based infrastructure · Infrastructure as Code (Terraform) · Secure API design · Multi-cloud deployments (AWS, GCP) · Messaging systems (Kafka, Pulsar, Pub/Sub) · Observability & production reliability

Core technologies: TypeScript, Node.js, NestJS, Kubernetes, Terraform, PostgreSQL, AWS, GCP, Prometheus
