PROFESSIONAL SUMMARY

Senior Backend & Platform Engineer with 8+ years across Web3, distributed systems, and application development. Production experience at Yuga Labs and tokenproof - on-chain authentication, event-driven microservices (Pulsar/Pub/Sub), and Kubernetes infrastructure on AWS and GCP. Daily user of AI coding agents (Claude Code, Cursor) and author of [Ajolopy](#) - a Python framework for AI-native applications (LLMs + agents + tools + evals + MCP as first-class primitives). 7+ year sysadmin foundation underneath.

CORE COMPETENCIES

AI-Native Application Framework (Author)

Model Context Protocol (MCP)

Hybrid RAG (Postgres + Qdrant)

Multi-Provider LLM Integration

Deterministic-First Agent Pipelines

Distributed & Event-Driven Systems

Kubernetes & Infrastructure as Code

AWS & GCP Cloud Platforms

Web3 & Blockchain Integration

WORK EXPERIENCE

Yuga Labs

Dec 2024 - Feb 2026

Senior Software Engineer · Backend & Platform

Remote

Distributed backend services for high-traffic blockchain products. High-throughput APIs, Kubernetes scalability, incident response, and multi-cloud observability (AWS/GCP).

Tech: TypeScript · NestJS · Kubernetes · AWS · GCP · MongoDB · PostgreSQL · Shopify · Next.js · Solidity · Prometheus · Jira · Privy

tokenproof

2022 - Dec 2024

Senior Software Engineer · Backend & Platform

Remote

Distributed authentication systems with on-chain verification, event-driven microservices (Pulsar/Pub/Sub), Kubernetes with Terraform/Terragrunt, and multi-cloud CI/CD. Scope grew from Salesforce ↔ MongoDB integrations to senior platform.

Tech: Pulsar · Pub/Sub · Terraform · DevOps · MongoDB · SOQL · Visualforce · NestJS · React · Shopify · Next.js

METAONE

Mar 2022 - Sep 2022

Founding Engineer / Blockchain Developer

Hybrid · GLD Mex

Technical leadership of early-stage Web3 products (DeFi and NFT). Gas-optimized Solidity smart contracts, wallet provider integrations, and product-aligned architecture.

Tech: Solidity · Ethers.js · Next.js · Hardhat

Savare Medika

Mar 2018 - Mar 2022

Software Engineer · Backend & Enterprise Integrations

On-site

Enterprise backend in Java and C# on AWS. HA Salesforce ↔ CONTPAQi sync via Apache Camel + C# API + JS proxy. Extended Salesforce platform (Apex, SOQL, Visualforce, Objects), Kafka event-driven patterns, and web maintenance.

Tech: Java · C# · AWS · Apache Camel · SOQL · Visualforce · Kafka · Express

Various

2006 - 2018

Sysadmin & Infrastructure

Early career · Various

Generalist sysadmin in enterprise environments: Linux/Windows servers, networking and firewalls, Active Directory and Open Directory, storage and IP video surveillance. Foundations in reliability, uptime, and operational continuity that still shape how I think about production.

Tech: Linux/Windows · Networking · Active Directory · Firewalls · Storage

SELECTED PROJECTS

Ajology [Open Source](#) · [AI Framework](#) · [PyPI](#)

Author and maintainer of an opinionated Python framework that treats LLMs, agents, tools, prompts, evals, streaming, and MCP as first-class primitives - the "default choice" category that was empty in Python before v0.1. Designed for Python 3.14+ with Pyright strict, DI by type-hints, and asyncio TaskGroup assumed throughout. Optional extras: otel, mcp, redis, postgres, mongo, qdrant, pgvector. Model-agnostic architecture: the same agent code, prompts, and validators swap between local coder models, hosted frontier models, and self-hosted models without rewriting.

Python 3.14+ · pydantic · MCP · asyncio · Pyright strict · MIT · pypi.org/project/ajology · github.com/jcocano/Ajology

pkmn-vgc-copilot [Open Source](#) · [AI](#)

Vendor-agnostic AI copilot with hybrid retrieval (Postgres for canonical and relational data, Qdrant for semantic search) under strict per-store citation discipline - every answer cites a source row, SQL aggregation, or vector hit. Slash-command analytical layer (meta analysis, anti-meta, team-builder, match analyzer) compatible across Claude Code, OpenCode, Cursor, Codex CLI, and Aider via a shared two-mode AGENTS.md system. Self-contained ingestion pipeline (replay parsing, YouTube transcription via Whisper, embedding indexing).

Node.js · Postgres · Qdrant · Ollama · Whisper · Docker · github.com/jcocano/pkmn-vgc-copilot

simple-template [Open Source](#) · [MCP](#)

Local-first email editor (Electron + React + SQLite) with an embedded Model Context Protocol server exposing 28 typed tools (Zod-validated) so external AI agents (Claude Desktop, Cursor, Zed) drive the app end-to-end with zero hallucinated HTML. Five-provider LLM integration (Anthropic, OpenAI, Google, Ollama, OpenRouter) with API keys encrypted in the OS keychain, six-language UI, and pre-flight review across content, accessibility, compatibility, and CAN-SPAM compliance. Strict Electron security defaults (contextIsolation, sandbox, preload-only IPC).

TypeScript · Electron · React · better-sqlite3 · MCP SDK · electron-builder · github.com/jcocano/simple-template

Dragora [Side Project](#) · [Under Active Development](#)

Esports tournament automation platform: Discord bot in Rust automating Start.gg workflows, AI-assisted bracket generation, and real-time match analytics. Sole builder and architect; designing event-driven backend and live data pipelines for high-concurrency tournaments. Public surface at dragora.gg.

Rust · Discord API · Start.gg API · event-driven backend · dragora.gg

cli-mailer [Open Source](#) · [CLI](#)

Zero-dependency Node CLI for bulk email via any HTTP API (SendGrid, Mailgun-style auth out of the box). Dry-run mode, configurable inter-send delay, JSON-driven mailing lists. Designed for transparency and operator control - no SDK lock-in, no opaque dependencies, no hidden state.

Node.js · JavaScript · MIT · github.com/jcocano/cli-mailer

Made by Apes (MBA) - Yuga Labs [2025](#)

Owned delivery of the official BAYC/MAYC IP licensing platform: friction-less signature-free authentication flow that removed security barriers, plus a real-time synchronization engine that reflects on-chain ownership changes across the platform.

TypeScript · Node.js · Kubernetes · AWS · on-chain integration

PUBLICATIONS & SELECTED WRITING

I built an agent that migrates Snowflake to Databricks, almost completely [LinkedIn](#) · [May 2026](#)

Technical writeup on building an agent that migrates Snowflake to Databricks. All technical detail and framing live in the article - this entry is a pointer, not a summary.

linkedin.com/pulse/i-built-agent-migrates-snowflake-databricks-almost-jesus-cocaño-ignme

Devs: I almost got owned through a fake job interview today [LinkedIn](#) · [May 2026](#)

Technical breakdown of a state-sponsored attack vector targeting blockchain engineers via .vscode/tasks.json with runOn: folderOpen and whitespace-obfuscated curl|bash payloads served from Vercel-hosted infrastructure. Documents the exact mechanism, detection heuristics, and defensive workflow (VM-first repo inspection, manual config review). Demonstrates senior-grade security awareness applied to the modern AI-IDE attack surface.

SKILLS

AI Engineering: Ajolopy (author / Python framework for AI-native apps) · Anthropic SDK · OpenAI SDK · Google (Gemini, AI Studio, NotebookLM) · OpenRouter (multi-provider gateway) · Hugging Face · Ollama · LM Studio · Model Context Protocol (MCP) servers · RAG with vector stores (Qdrant) · function calling · streaming · agent design · token & cost observability · deterministic-first pipelines (AST validation before LLM) · behavioral parity testing

AI Coding Agents: Claude Code · OpenCode · Codex CLI · Cursor

Programming Languages: Python (3.14+, Pyright strict) · TypeScript (Node.js) · JavaScript · Rust · Java · C# · Solidity · SQL

Data & SQL Tooling: SQLGlott (AST parse/transpile) · DuckDB · PySpark · Delta Lake

Frameworks: NestJS · Express.js · NextJS · React · Astro · Electron · .NET Core · Visualforce/Apex

Cloud & DevOps: AWS (EKS, Lambda, SQS) · GCP (Compute Engine, Cloud Functions, Pub/Sub) · Kubernetes · Docker · Terraform / Terragrunt · GitHub Actions (CI/CD)

Messaging & Data: PostgreSQL · MongoDB · Salesforce · Apache Kafka · Apache Pulsar · Google Pub/Sub · RabbitMQ · Redis

Tooling: Git · Prometheus · Grafana · ELK Stack · JIRA / Agile

Spoken Languages: Spanish (native) · English (professional working proficiency)
